BRYAN DONKIN ANNOUNCES CSA 6.22 APPROVAL!

CHESHIRE, Conn. – Bryan Donkin is proud to announce that CSA 6.22 Approval for the company's 240, 260, and 274 regulator lines is official. The company is in possession of a formal letter from CSA stating that all tests have been passed, and that the products meet with the needs, expectations and documented performance as tested in the CSA labs.

Bryan Donkin USA VP of Engineering Sales Jon Moore noted, "Not only are these regulators approved as stand-alone regulators, but we have also obtained the indoor vent-less approval for line pressure regulators (Section Z21.80) by applying the SD-OPCO (safety diaphragm in conjunction with the Over Pressure Cut-out Device) to each of these models. Additionally, the OPCO's have been individually approved by CSA 6.22."

As a Nationally Recognized Testing Laboratory, CSA has developed a reputation as a trusted authority and certification association for electrical, mechanical, plumbing, gas and other products. CSA International is accredited by national agencies including OSHA, ANSI, NVLAP, NES, and SCC. OSHA accredited laboratories are certified to conduct tests to applicable U.S. standards, including ANSI, UL, CSA, NSF and others.
